

This week, besides reading the book "The Beauty of Mathematics". I coding the VAUD project.

1. Read the book(4-12chapter), and doing the reading notes.
  - a) Hidden Markov method use the characterization external to infer the node which are hidden.
  - b) Use simple and effective method when start the project.
  - c) Page rank which including the probability theory they used.
2. Coding the VAUD project.
  - a) Coding the node structure.
  - b) Coding the query method.
  - c) Divide the data structure of node into two types, as well as the CSS file.
  - d) Coding the two node js file respectively.

Next week I will work on doing the research on Spatio-temporal database and considering how to achieve the STC in it.
